About me

I am really curious and I love learning new things. I am really interested in social skills and communication and I like to teach how to do things that I like (for example Coding or Managing data). That is why I am a member of a community of practice where we share our passion for automation and analytics.

Interests

I want to work in a company which always faces new challenges, so that I will be able to grow professionally and personally. Besides, I would love to be part of a great team using new technologies to keep myself updated.

Experience

Full Stack Developer: Vindow (Contractor)

Jul-2020 - Present

- Add web user interaction through React components
- Create and maintain API endpoints
- Unit and integration testing using JEST
- Design and implement software architecture
- Deploy services using AWS
